

# Anurag Kar

U.S. Citizen | Atlanta, GA | 929-374-7328 | [anurag@anuragkar.dev](mailto:anurag@anuragkar.dev) | [www.anuragkar.dev](http://www.anuragkar.dev)

## EDUCATION

### New York Institute of Technology

Bachelor of Science in Computer Science, 3.68 GPA

New York, NY

Sep 2021 - Dec 2024

## TECHNICAL SKILLS

**Languages:** Python, Java, SQL, PHP, HTML/CSS, JavaScript

**Developer Tools:** SQL Server, MySQL, AWS DevOps Guru, AWS RDS, Google Cloud, Power Platform, Git

**Libraries/Frameworks:** Flask, Django, React, Next.js, Node.js, BeautifulSoup4, tkinter, spaCy, pandas, NumPy

## EXPERIENCE

### Platforms Operations Intern

Smurfit Westrock

May 2024 – August 2024

Atlanta, GA

- Automated the metrics collection of over 10,000 network and VMWare resources by leveraging the LogicMonitor API with recursive API calls, improving data retrieval efficiency
- Optimized data extraction across of more than 2,500 IBM, Linux, and Windows servers using Fabric for SSH connections and regex for text processing, saving substantial manual effort
- Implemented a GUI-based data entry system using tkinter and pyodbc, incorporating validation techniques to ensure data accuracy before database insertion
- Built Power BI dashboards to monitor OKRs, using SQL Server as the data source to accurately reflect changes in supported resource counts due to product end-of-life cycles
- Conducted a proof of concept for AWS DevOps Guru with RDS for MySQL to evaluate the tool's monitoring and detection capabilities, using Python to simulate in excess of 500 concurrent users executing inefficient queries

### IT Student Assistant

New York Institute of Technology

April 2024 – May 2024

New York, NY

- Maintained computers and classroom equipment across campus while troubleshooting technical issues

## PROJECTS

### F1 Data Analysis Bot | Python, Google Cloud, BeautifulSoup4

Feb 2023 - Present

- Developed and maintained a Python-based Discord bot that delivers real-time information and statistics about the Formula 1 (F1) championship to enthusiasts, ensuring dependable hosting and scalability on the Google Cloud Platform with deployment across 26 Discord servers
- Integrated various APIs (Discord, Wikipedia, FastF1, Weather) to provide comprehensive F1 race updates, detailed telemetry, and weather forecasts for a Discord community, enhancing engagement and user experience
- Streamlined data retrieval by employing BeautifulSoup4 to web scrape images from the F1 website and driver information from Wikipedia, enhancing user engagement with timely and relevant content
- Achieved significant outreach by using bot-generated graphics to engage more than 760,000 individuals on social media, and was featured on a popular motorsports data analysis channel with over 1,000,000 subscribers

### Collaborative Travel Planner | Flask, JavaScript, Google Cloud, SQLAlchemy, spaCy

Sep 2023 - Dec 2023

- Engineered a Flask-based travel planning application that accurately filters and recommends top 5 locations based on personalized queries and location data
- Developed an itinerary management system using SQLAlchemy with secure Google OAuth authentication, session management, token-based password resets, and features to view, edit, and delete itineraries
- Crafted a location recommendation algorithm by integrating Geopy for geocoding and the Google Maps API to identify top-rated locations, improving accuracy and relevance in location recommendations
- Optimized query results by applying natural language processing with spaCy to filter and extract key nouns and adjectives from user input, which significantly improved the relevance and accuracy of search outcomes
